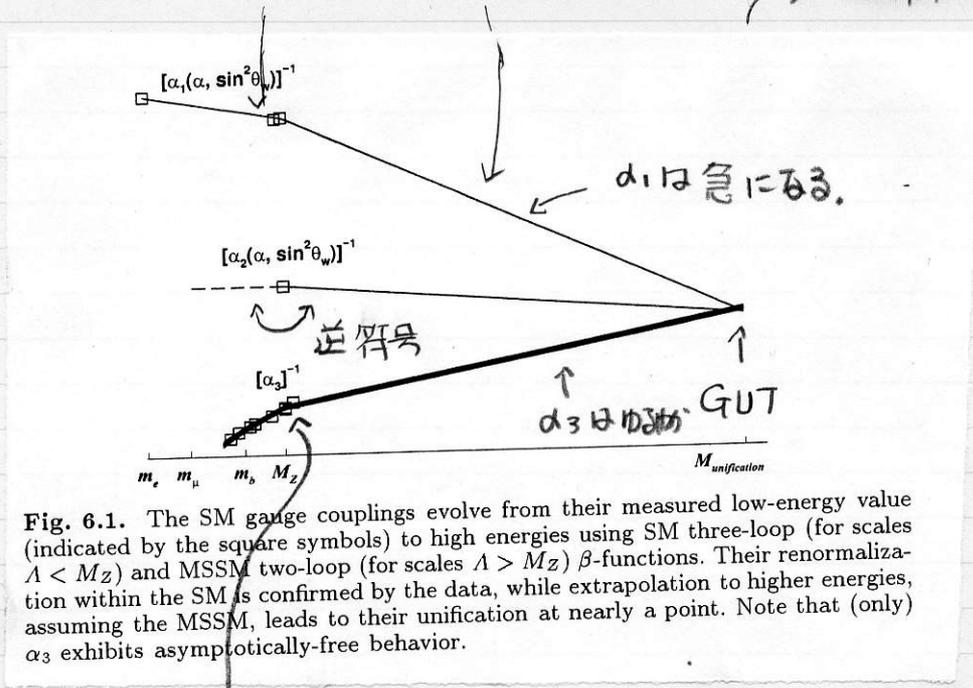

Fig. 6.1. The SM gauge couplings evolve from their measured low-energy value (indicated by the square symbols) to high energies using SM three-loop (for scales $\Lambda < M_Z$) and MSSM two-loop (for scales $\Lambda > M_Z$) β -functions. Their renormalization within the SM is confirmed by the data, while extrapolation to higher energies, assuming the MSSM, leads to their unification at nearly a point. Note that (only) α_3 exhibits asymptotically-free behavior.

Non-Universal Higgs Mass (NUHM)

2-6で述べている様に 全てのスカラーが同じと言うのはやりすぎ

Higgs の mixing $|\mu|$ (3-10)

↑決め打ち。

mass m_A (3-17)

特に $|\mu|$ は $\tilde{\chi}_0^0, \tilde{\chi}_2^0, \tilde{\chi}_1^\pm$ の性質を決定するもので大切

→ free にしておく。
